Memorandum to Kispiox Community Members

Water Restrictions

I am writing today to remind community members that Kispiox is still under water restrictions. Therefore, we ask that you do not water your lawns, fill children's swimming pools or use excessive water. This is an issue of water quantity, not water quality. Our water is continuously tested and there are no health related concerns from the potable water.

The current situation is that one of the two wells is down for servicing. The back up well is barely able to keep up with the demand for water in the community; hence, the need to conserve as much as possible.

In May 2015, the Kispiox Band Council approved a waterworks program that consists of several phases. The first phase was to test and rehabilitate the existing wells. It was determined that a new well was required and on June 3, 2015 Council approved the process to drill a 3rd well for Kispiox.

In conclusion, we ask for your continued support as we work to ensure all water quality and quantity requirements are met now and in the future.

Please do not hesitate to contact me should you require further information.

On behalf of the Band Council,

Jim Leschuk
Band Manager
